CHAPTER 5

ASYMPTOTIC TECHNIQUES IN NONLINEAR PROBLEMS: SOME ILLUSTRATIVE EXAMPLES

V. Hakim

Introduction

1

Boundary-layers and matched asymptotic expansions

1.1 An elementary example of boundary layer; inner and outer expansions

1.2 Landau and Levich coating flow problem

1.2.1 *Physical setting and dimensional arguments*

1.2.2 *The inner region*

1.2.3 *Matching between the inner and outer regions*

1.2.4 *Experimental measurement of the wetting film and miscellaneous remarks*

2

Multiscale analysis and envelope equations.

2.1 The pendulum period by multiscale method

2.2 The nonlinear Schrödinger equation as an envelope equation for small amplitude gravity waves in deep water

2.2.1 *A short introduction to water waves*

2.2.2 *Weakly nonlinear expansion of periodic waves and secular terms*

2.2.3 *Stokes's nonlinear dispersion relation*

2.2.4 *Evolution of slowly modulated wavetrains*

2.2.5 *Miscellaneous remarks*

2.3 Amplitude equation from a more general viewpoint

3

Fronts and localized states

3.1 Front between linearly stable states

3.1.1 *Front solution for the real Ginzburg–Landau equation and mechanical analogy*

3.1.2 *Localized states and front interaction*

3.1.3 *The complex Ginzburg–Landau case*

3.1.4 *Reaction-diffusion models*

3.2 Invasion of an unstable state by a stable state

3.2.1 *Continuum of front velocities in the Fisher–KPP equation*

3.2.2 *The criterion of linear marginal stability*

3.2.3 *Nonlinear selection of the front velocity*

4

Exponentially small effects and complex-plane boundary-layer

4.1 Introduction

4.2 The example of the geometric model of interface motion

4.2.1 *The geometric model*

4.2.2 *A perturbative approach*

4.2.3 *A simple shooting argument*

4.2.4 *Boundary-layers in the complex plane*

4.2.5 *Solution of the inner problem and non existence of the symmetric needle*

4.2.6 *Matching between the inner and outer region and exponentially small terms*

4.2.7 *Asymptotics of the inner problem via Borel summation*

4.3 The viscous finger puzzle

4.3.1 *Analytic solutions vs. experiments and numerics*

4.4 Miscellaneous examples of exponential asymptotics in physical problems

4.4.1 *Linear examples: Above barrier reflection in the semiclassical limit and conservation of adiabatic invariants*

4.4.2 *Exponentially small decay of solitary waves*

4.4.3 *Pinning of fronts and splitting of separatrices*
